

Implementation Roadmap

1. Implementation Approach

The proposed improvements should be implemented in phases to reduce operational risk and allow the business to validate results at each stage.

2. Implementation Phases

Phase	Activities	Priority	Expected Outcome
Phase 1 — Data & KPI Foundation	Improve data validation, define KPI definitions, establish cancellation reporting	High	Reliable and consistent cancellation monitoring
Phase 2 — Analysis & Investigation	Identify high-cancellation products, markets, periods, and high-value cancellations	High	Priority problem areas identified
Phase 3 — Process Improvement	Investigate potential root causes and implement corrective operational actions	High	Reduction in recurring cancellation issues
Phase 4 — Dashboard & Monitoring	Use Power BI for regular KPI monitoring and performance tracking	High	Continuous visibility into cancellation performance
Phase 5 — AI Decision Support	Use AI to summarize validated findings and support business interpretation	Medium	Faster insight generation
Phase 6 — Continuous Improvement	Review KPIs periodically and refine processes based on results	Medium	Sustained performance improvement

3. Proposed Timeline

Phase 1

Data & KPI Foundation

Phase 2

Analysis & Investigation

Phase 3

Process Improvement

Phase 4

Dashboard & Monitoring

Phase 5

AI Decision Support

Phase 6

Continuous Improvement

4. Key Stakeholders

- Business Management
- Business Analyst
- Operations Team
- Inventory / Fulfilment Team
- E-commerce / Sales Team
- Data / BI Team
- IT / System Team

5. Implementation Dependencies

The implementation depends on:

- Availability of reliable transaction data.
- Agreement on KPI definitions.
- Business stakeholder validation of findings.
- Availability of relevant operational teams for root-cause investigation.

- Power BI reporting access.
- Appropriate review and validation of AI-generated insights.

6. Success Measures

Implementation success can be monitored using:

- Cancellation rate.
- Cancelled transaction volume.
- Cancellation transaction value.
- High-cancellation product performance.
- High-cancellation market performance.
- Data-quality improvement.
- Regular Power BI dashboard usage.
- Effectiveness of corrective actions.

7. Risks and Mitigation

Risk	Mitigation
Poor data quality	Establish data validation rules
Incorrect interpretation of AI insights	Require human validation
Lack of stakeholder adoption	Involve stakeholders during requirements and review stages
Root causes not visible in transaction data	Conduct additional operational investigation

KPI definitions differ between teams Establish standardized KPI definitions

8. Expected Outcome

The roadmap provides a structured path from data-quality improvement and cancellation analysis to process improvement and continuous monitoring. It enables the retailer to move from identifying cancellation problems to implementing and measuring corrective actions.
